

RESCUE EQUIPMENT - BODY RECOVERY EQUIPMENT

BODY RECOVERY SYSTEM

The Body Recovery System is used to recover a body from the waters surface or from underwater. Developed

in collaboration with the Strathclyde police, the recovery system reduces the risk of evidence contamination.

KEY BENEFITS:

Surface recovery utilises the SB Rescue Sling which allows the operator to quickly and easily recover the body without having to physically touch the deceased

Mesh design allows water to disperse without loss of forensic evidence

Carrying handles facilitate the transfer of a recovered body

Body Recovery System	Product Code
Body Recovery System	FLBB/HD

UNDERWATER RECOVERY

Underwater recovery presents other challenges, for which we offer an alternative version of the Body

Recovery System. This is manufactured from a heavier material, and is designed for deployment by a diver.

AMBULANCE POUCH

Ambulance Pouches for transporting recovered bodies from the water to the mortuary.

Ambulance Pouch	Product Code
Ambulance Pouch	FLLAMPCH
